

Astute LXP Release Notes May 2026 (V3.5.2)

Release Date: May 20th 2026

This update focuses on continuing to improve the day-to-day experience for administrators and learners across Astute.

A large part of this release builds on the recent launch of Instructor-Led Training, with improvements to how classes appear for learners, how administrators manage approvals, how ILT activities are selected in Enrolment Events, and how supporting resources can be shared through trigger emails.

We have also made smaller refinements across Email Management and Learner Management, including tidier mail merge fields and clearer instruction when adding learners.

Enhancements

Instructor-Led Training

We have made further improvements to Instructor-Led Training to support a smoother experience for administrators and learners.

These include:

- Clearer display of available ILT classes on the learner home page.
- The ability to include ILT resource links in trigger emails using the #ILTResourceLinks# merge field.
- Improved visibility of pending ILT approvals on the Training Schedule.
- ILT can now be selected as a filterable activity type when adding activities to Enrolment Events.
- Course modules are now locked from being edited once a class has been scheduled or completed. This protects scheduled sessions and existing enrolment and completion records from unintended changes.

Email Management

Mail merge fields in Trigger and Chaser emails have been tidied up, making it easier for administrators to choose the correct fields when building email templates.

Learner Management

We have made a small update to the Add Learner form so mandatory Department and Job Title fields are now marked more clearly.

Bug Fixes

Instructor-Led Training

- ILT module options will no longer appear twice when scheduling a class.
- Learners added to an attendance register can now be marked as expected.
- Learners can now be enrolled on more than one ILT course at a time.
- Copying a class from the past no longer locks the settings on the new class.
- The Assign Classes step no longer appears in the Enrolment Event wizard when no learners have been added at that stage.
- Archived ILT courses no longer appear on the learner home page.
- ILT classes with no maximum attendee limit now correctly behave as having no maximum, rather than being treated as having a maximum of 0.
- When scheduling a class, the module selection now correctly excludes any modules that have been deleted.
- Resolved an issue where archived ILT courses could not be unarchived. Administrators can now restore archived ILT courses when needed.
